Benefits of HTI hovercraft:

Can be used on fast flowing water e.g. flooded rivers as current has little effect on craft when hovering. This means the pilot is able to maintain speed and direction or even remain stationary, maintaining position to carry out rescues etc. without fighting the water current.

Can be launched onto rivers and floodwater without use of a slipway providing a reasonably low bank can be accessed. No need to back a trailer down into the water. The hovercraft can be flown (or reversed) in.

Hovercraft can be operated over underwater obstructions such as fences, walls and debris without hindrance and there is no propeller to foul. If you can't see an obstruction you can't hit it.

No propeller in the water means less risk to casualties in the water or crew when working close to the craft.

Extreme manoeuvrability and controlled reverse capability as well as the ability to stop quickly means this type of hovercraft can be operated in confined spaces such as narrow streets and flooded caravan sites.

Hovercraft can be used on mixed surfaces where boats cannot be effective such as areas which mean negotiating water and dry areas to get to casualties or working sites and can cross water to work on areas of dry or unflooded land.

As well as working over deep water the hovercraft can work on tidal or river areas where water is too shallow for powered boats and over mud flats or shoals.

With accurate directional control the hovercraft can negotiate slopes, reverse and even turn in it's own length.

Manufactured to be inherently buoyant the hovercraft can float on water or soft mud without risk if required providing a stable working platform.

Can be lifted by crane or even carried by helicopter to access difficult areas.

4 stroke Yamaha® engine, instruments and wiring.

5 years warranty no excuses guarantee.

Kevlar® & Carbon vacuum construction with epoxy resin protect by Gelcoat® outside.

Bottom hull full filled of closed cells foam fire retardant.

Carbon high vacuum propeller fan blades.

Teflon lining abrasive resistant of the bottom surfaces.

ISO 9000 certified quality.

!!! HTI BUILDS PATENTED TOOLS FOR RESCUE, NO TOYS !!!
