Born in 1994 Hi Tech International S.r.l. design, build and distribute worldwide amphibious vehicles and special operation boats in order to provide quickly response on the earth.

Due to some important consideration:

75% of the earth's surface is covered with water
More than 97% of the earth's water is in its oceans
About 2% of the available drinking water is frozen leaving only 1% for drinking

The world's average rainfall is about 850 mm
Water regulates the Earth's temperature. It also regulates the temperature of the human body, carries nutrients and oxygen to cells, cushions joints, protects organs and tissues, and removes waste
60% – 75% of the adult human body is water – 82% of blood is water, 70% of the brain and 90% of the lungs are made up of water
More than half the creatures on the Earth are found under water
Life on earth probably originated in water
10% of the earth's surface is covered with ice

and according to the information above mentioned our Company had to develop vehicles able to run on the multiple surfaces existing and specially on the water.

Water safety is also an emerging issue for the costal control and patrol, especially in case of tsunami or floods, but not only.

In order to better serve, patrol, assist and protect our community in off shore or in shore waters the modern studies suggest to us to drive our choice to large small units fleets instead of few big vessels.

This due to the facts that the small units are quickly to be used in case of call, easy to be driven, easy to be maintained, they do not need special training or special operators, they can be capillary deploy, their costs of purchase and maintaining are lower, and the experience we have clearly figure out that the small unit fleet is able to reach 80% more of any areas versus any big unit fleet.

According to what we said before HTI developed its own range of product:
www.hovercraft.it
www.jetrescue.it
www.airboat.it
www.waterecue.it
www.skirescue.it

based on the lowest operating costs, highest power, five years warranty no excuses and 25 years of design life for each one of them.

HTI is a ISO9000 certified company supplying the state agencies world wide, such as:

Law Enforcement (Police, Immigration, Custom, ...)
Fire Fighters
Civil Defence
Armed Forces (Coast Guard, Navy, Army, Air Force, Special Forces, ...)
Bay Watches
Search and Rescue Forces

More than this HTI only move its steps based onto local qualified distributors which provides locally the assistance, maintenance and after sales service.

More than this HTI has a long term contract with TSAR which is the most important international training school, in order to provide basic and advanced training to its customers operators and continues training in order to make instructor able to train and prepare their own pilots of the vehicles produced by HTI.

The amphibious and marine vehicles made by HTI are IMO certified code 3 at list and are designed in order to provide the maximum safety possible allowed by the most hi tech available today for the people riding on them.

The pollution is something that HTI took as must for all its range of product so no one of them is less than euro 4 standard.

The spare parts of HTI products are available by www.dhl.com in less than 24h from the written order or in shorter time if available by the local distributor.

All HTI products are easy to be driven, maintained, repaired and they have the highest reliability on the market today.

Please do not hesitate to contact us for any more information.
